

# Design & Landscaping

## A contemporary design

An updated Aldi food store will transform a long-term vacant brownfield site and will provide shoppers with an improved and transformed local shopping experience.

This new and improved store will replace our current site in the town centre, offering shoppers easier access to Aldi's high quality, low price goods.

## Landscaping

Aldi takes great pride in the quality and design of its stores, with landscaping a key part of creating an appealing and welcoming environment.

Landscaping across the site would aim to enhance its appearance with a mix of tree and shrub planting, providing an attractive setting for the new store.

## Sustainability

We are constantly working to reduce the impact our business has on the environment and have developed a range of initiatives that ensure our existing and future stores foster and promote sustainability.

Aldi is committed to using materials for the development of our stores that perform well with regard to the environment, either through composition or manufacture. We aim to minimise energy use in producing and transporting building materials, using recycled material from local sources as far as possible, and by choosing materials with low embodied carbon.

Apart from general waste, all waste such as packaging is returned to the distribution centre and sent on for recycling whilst pallets are reused in the delivery process.

The store's heat is generated from its on-site heat recovery system which means the store is self-heating and Aldi sources its electricity from renewable sources only.
