

# Design and Landscaping

## A Contemporary Design

Aldi plans to introduce a contemporary food store, designed to complement its setting within the local area and transform the appearance of the site.

The new food store would provide a modern shopping environment, offering a quality design featuring a glazed frontage to give a crisp, clean look to the building.

## Landscaping

Aldi takes great pride in the quality and design of its stores, with landscaping a key part of creating an appealing and welcoming environment.

Landscaping across the site would aim to enhance the appearance of the site with a mix of tree and shrub planting, providing an attractive setting for the new store.

## Energy Efficiency

Aldi is already meeting high standards of energy efficiency and is committed to responsible energy usage.

Aldi only uses environmentally friendly, energy-efficient refrigeration and lighting.

A heat recovery system from the refrigeration condensers provides almost all heating for the store, re-using otherwise wasted machinery heat.
