

# Design & Landscaping

## A contemporary design

The proposed food store would be contemporary in design, providing a modern shopping environment.

Designed to a high-quality, the food store would feature timber cladding and the proposed roof will allow natural light to flood the retail area.

## Landscaping

Aldi takes great pride in the quality and design of its stores, with landscaping a key part of creating an appealing and welcoming environment.

Landscaping across the site would aim to enhance the appearance of the site with a mix of tree and shrub planting, providing an attractive setting for the new store.

## Energy efficiency

Aldi is already meeting high standards of energy efficiency and is committed to responsible energy usage.

All Aldi stores use environmentally friendly, energy-efficient refrigeration and lighting. A heat recovery system from the refrigeration condensers provides almost all heating for our stores, re-using otherwise wasted machinery heat.
